

TigerOG

A Story of Divine Providence, Rebirth and Redemption

February 2026

Version 1.7

In the world of DeFi, the departure of a founder is typically followed by the project's demise, particularly when a project is still in its infancy. If it were not for God's intervention, this project would have shared the same fate. Rescue and redemption are indeed themes at the heart of the story of TigerOG.

Trust is a hard-won commodity in the digital asset space, as rug-pulls are all too common. This was reinforced further when the original developers of BNB Tiger Inu attempted to force a migration, abandoning the immutable contract to launch a new, seemingly identical token. They expected the community to follow and the original version to fade into oblivion, but they were wrong.

The Birth of the God Takeover (GTO)

The contract at address 0xac68931b666e086e9de380cfdb0fb5704a35dc2 was more than just a meme coin—it was an “immutable sovereign territory” that God had big plans for. When the original developers abandoned the token, betraying the trust of the community, they flipped a switch they didn't intend to.

This led to the forming of the **GTO**. While many Community Takeovers (CTOs) struggle to find footing, the OG movement seized the digital high ground. The original immutable contract, now abandoned by its developers, was changed from “BNB Tiger Inu” to “BNB TigerOG”.

In the wake of the betrayal, the community leaders didn't just preserve the token; they transformed the brand with one key distinction.

God is the CEO

Through dreams, visions and inspired words from God, the leadership team was led step by step through the fire, and into something more wonderful than anyone dreamed.

Strange as it might seem to some, the core of TigerOG is this: God is in charge of this project. Team meetings regularly begin and end with prayer. Group scripture reading is common. Egos and personal agendas are kept in check, with the help of the Holy Spirit and mutual accountability. To the best of our abilities, every individual involved contributes technically, artistically, and/or spiritually.

TigerOG has transcended its meme coin origin, and is now battle-tested and ready for the next phase. Visions and rhema words regarding future **utility** abound.

Matthew 6:33; *But seek first the kingdom of God and His righteousness, and all these things shall be added to you.* (NKJV).

In 2026 and beyond, we will continue to be led by the Spirit of God into what He wants for this project. Not VCs, not anyone else. GOD.

Section I: The 9% Tax Protocol – Breaking the Cage Open

1.1 The Parasitic Inheritance

The original BNBTiger contract contains a 9% transaction tax that is hard-coded and immutable. This tax was designed by the original developers as a mechanism to extract value from every holder. Following the **God Takeover (GTO)**, a stark reality emerged: **The 9% tax continues to trigger on every trade, but the community has no access to these funds.** This tax is no longer a protocol fee - it is **Legacy Friction**, a black hole where 9% of every transaction is swallowed by a contract that has no developers and no purpose.

1.2 The Economic Sabotage of 9%

To a sophisticated investor in 2026, a 9% tax is a non-starter. It creates:

1. **Arbitrage Paralysis:** The tax is so high that price gaps between exchanges cannot be closed efficiently, leading to "stale" prices.
2. **The Entry Barrier:** New investors are essentially "down" 9% the moment they buy, discouraging new capital from entering the BSC ecosystem.
3. **Institutional Rejection:** Tier-1 exchanges and institutional vaults do not list the token because the 9% tax breaks their internal balancing and compliance math.

Section II: Uncage the Tiger – Freedom Bridge

2.1 Beyond Bridging: The Irreversible Upgrade

Psalm 127:1 *Unless the LORD builds a house, they who build it labor in vain;* (NASB)

Traditional bridges create wrapped assets that are tethered to their original chain by a central vault. This creates a single point of failure and in this case maintains the friction of the original contract.

Freedom Bridge (www.freedombridge.xyz) operates on a superior architectural philosophy: **The Permanent Upgrade.**

The Freedom Bridge contract at 0x18b2AeD6Aa6aE20A70be57739F8B5C26706Ff2af provides BNBTiger holders a permanent upgrade into a tax-free, multi-chain beast.

2.2 The Burn-and-Mint Mechanism

Powered by the **Axelar Network (www.axelar.network)**, the Freedom Bridge utilizes a strict Burn-and-Mint protocol:

1. **The Sacrifice (Burn):** Utilizing the `upgrade()` function on the BNB Smart Chain, BNBTiger tokens are permanently removed from the BSC circulating supply. The tokens can never be recovered or moved back into the 9% tax environment.
2. **The Proof:** The Axelar Network's decentralized validator set verifies the burn event in real-time.
3. **The Rebirth:** A fresh, tax-free TigerOG token is minted. Contract Address: 0xCF7Fc0De71238c9EC45EC2Fd24FDc8521345dbB5
4. **The Swagger:** TigerOG's CA remains the same across all chains, making it easily recognizable.

Total supply never changes.

Tokens are converted exactly 1:1. No inflation, no dilution.

2.3 Freedom Zones: The New Frontier

Every chain connected via Freedom Bridge becomes a **Freedom Zone**. In these zones, TigerOG operates as a standard ERC-20 token with **0% transaction tax**. The Tiger is free to roam.

- **Institutional Grade:** Tax-free tokens are compatible with CEX internal ledgers and high-yield liquidity pools.
- **Volume Amplification:** Traders can execute thousands of micro-trades without the 9% tax-drag eating their capital.
- **Price Discovery:** Without the tax barrier, the price of TigerOG in Freedom Zones reacts instantly to global market shifts, providing real price discovery.

2.4 Security via Axelar ITS

By leveraging the **Axelar Interchain Token Service**, we eliminate the honeypot risk associated with bridge vaults. The supply is mathematically balanced across all chains; there is no vault to hack because the tokens are destroyed on one side before being created on the other.

Section III: The Mathematics of the Permanent Upgrade

3.1 The One-Way Supply Vacuum

The Freedom Bridge does not just "move" tokens; it evacuates them. Because the upgrade() function is a one-way burn, every token that leaves its legacy contract is permanently upgraded.

This creates a **Supply Vacuum** on the legacy chain:

- **Permanent Destruction:** The legacy tokens are sent to a "dead" address, lowering the total supply on the taxed chain forever.
- **The Exit Incentive:** As more users upgrade to the 0% tax environment, the liquidity on the legacy chain becomes "thinner." For those who delay their upgrade, the 9% tax becomes an increasingly heavy burden as the pool of active traders on the legacy chain shrinks.

3.2 Value Reclamation via Minting

While the legacy tokens are destroyed, their value is reclaimed on the destination chain.

By burning and minting, users move their value from a Stagnant Asset (taxed 9%) to an Active Asset (taxed 0%).

3.3 The Network Effect of Upgrading

The mathematics of the upgrade favor the early adopters:

- First-Mover Liquidity:** Those who upgrade first populate the new 0% tax pools on chains like Polygon or Base, becoming the foundation for the new global market.
- CEX Compatibility:** Only the 0% tax "Upgraded" tokens are suitable for listing on major Centralized Exchanges. By upgrading, you move your tokens from a "Dex-only" prison to a "Global Exchange" ready asset.
- Arbitrage Pressure:** As volume shifts to the Freedom Zones, the legacy price of BNB Tiger will be forced to follow the global 0% tax TigerOG, but legacy holders will always be 9% behind the market due to the tax.

Section IV: Multi-Chain Freedom

4.1 Supported Freedom Zones

Galatians 5:1 *It was for freedom that Christ set us free; therefore keep standing firm and do not be subject again to a yoke of slavery.* (NASB)

Powered by the **Axelar Interchain Token Service (ITS)**, the **Freedom Bridge** (freedombridge.xyz) provides irreversible 1:1 Upgrades from BNB Tiger into TigerOG, allowing it to access a growing ecosystem of high-liquidity blockchains.

TigerOG (0xCF7Fc0De71238c9EC45EC2Fd24FDc8521345dbB5) holders can currently deploy their tokens to:

- **BNB Chain (Tax-Free Layer):** Parallel liquidity to the legacy contract.
- **Ethereum:** The global settlement layer.
- **Polygon:** High-speed, low-fee retail trading.
- **Base:** Access to the massive Coinbase ecosystem.
- **Avalanche:** Sub-second finality for institutional traders.
- **Linea:** Advanced ZK-rollup efficiency.
- **XRPL EVM:** The premier smart-contract layer for the XRP Ledger ecosystem.

Every trip to a new chain is tax free and hassle free. Simply pay a small Axelar gas fee to transfer TigerOG tokens to a different supported network.

4.2 Technical Sovereignty: Why Ownership is Retained

The contract ownership is not revoked, and it will not be revoked.

This is a deliberate architectural choice for the following reasons:

- Future-Proofing:** The blockchain landscape is evolving. To add new "Freedom Zones" (such as emerging Layer 2s or non-EVM chains), the contract must remain upgradeable to integrate new Axelar gateways.
- Security Maintenance:** In the event of a critical external network vulnerability, the community-led multisig must have the power to pause or redirect bridge traffic to protect holder value.
- Sustainable Expansion:** Revoking ownership is usually seen as a positive, instilling trust that a project won't get rug-pulled. In this case however, revoking ownership of the contract is a dead-end move. By maintaining active governance and curation, community leadership ensures that TigerOG can roam wherever liquidity flows in the years to come.

Section V: Smart Contracts, LPs and Supply

5.1 Verified Smart Contracts

The Upgrade Contract (Freedom Bridge) is responsible for converting the legacy token into TigerOG, making it a true interchain asset. The contract handles the burn and mint logic on BSC.

TigerOG utilizes the Axelar Network for its messaging protocol, securing cross-chain transfers and ensuring data integrity between different blockchains.

Interchain tokens are deployed via Axelar Interchain Token Service (ITS). TigerOG maintains identical addresses across all supported networks.

Component	Network	Contract Address
BNBTiger (Legacy)	BSC	0xac68931b666e086e9de380cfdb0fb5704a35dc2d
Upgrade Contract	BSC	0x18b2AeD6Aa6aE20A70be57739F8B5C26706Ff2af

TigerOG (Freedom)	Multi- Chain	0xCF7Fc0De71238c9EC45EC2Fd24FDc8521345dbB5
------------------------------	-----------------	--

5.2 Conversion Numbers and Liquidity Pools

As of today, over 30 Sextillion legacy tokens have been upgraded to TigerOG. 80% of those remain on the BNB Chain, while 9.7% have been moved to Base, and 8.7% have transferred to Ethereum.

TigerOG holders can swap on pancake swap (limited liquidity) tax-free.

5.3 Supply Dynamics

TigerOG has a fixed circulating supply derived from the original BNBToken token. The supply calculation accounts for all burned and permanently locked tokens at time of this writing. The legacy BNBToken token continues to burn tokens on each buy/sell transaction, so the actual circulating supply may be slightly lower than shown.

Category	Token Amount	% of Total
Original Total Supply	10,000,000,000,000,000,000,000,000	100.00%
Dead Address (Burned)	-5,772,706,396,234,535,780,783,775	57.73%
LP Locked (86.18% Burned)	-565,059,839,948,518,979,124,912	5.65%

Contract Balance (Stuck)	-6,142,342,823,271,327	<0.01%
Actual Circulating Supply	3,662,233,757,674,602,416,819,986	36.62%

Section VI: From Cub to King

6.1 The Chosen Token

The story of TigerOG is not a standard corporate roadmap; it is a proclamation of the sovereign power of God intervening wherever and whenever he chooses.

Isaiah 43:19 For I am about to do something new. See, I have already begun! Do you not see it? (NLT)

6.2 A Multi-Chain Apex Predator

As we look toward the remainder of 2026, TigerOG stands out as a unique hybrid in the digital asset space:

- **The Origin (BSC):** A high-friction "Home Chain" that continues to feed TigerOG with the legacy token.
- **The Claws (Multi-Chain):** A hyper-liquid, 0% tax asset roaming the world's most advanced L2 networks (Polygon, Base, Avalanche).

6.3 Free to Roam

The Tiger is uncaged. The bridge is open. Whether you choose to hold on to the legacy token or upgrade to the Freedom Zones for global trading, you are part of one of the most unique, God-centered projects in blockchain history.
